Dear Dentists and Implantologists,

The clinical and instrumental functional analysis has become an important pre-requisite of dental prosthetics. It is a guideline for the early detection of craniomandibular dysfunction (CMD), especially in view of implant planning and surgery.

3D navigation systems are your response to the continually growing esthetic and prosthetic demands of the patients.

IMPLA 3D significantly facilitates a perfect implantation.

IMPLA 3D by Schütz Dental is the ideal tool to motivate and educate your patients as well as for subsequent documentation of all cases.

Furthermore, it is an economic solution for the quick implementation of a predictable therapeutic long-term success.

Register today with the enclosed registration fax and personally benefit from the expert knowledge of our speakers!

SCHEDULE

July 22 – arrival Hotel Ku 101

08.00 pm – Dinner

July 23

09.00 am – Sebastian Sohst

● **3 dimensional imaging, CT and Cone Beam vs. OPG**
