An alternative for a better quality of life: dental implants

For many years now, dental implants have been an excellent long-term solution and a safe method for replacing missing teeth.

A dental implant replaces the root portion of the tooth. It is inserted where a natural tooth is missing. IMPLA implants are made of pure surgical titanium. Titanium is being used successfully in many different medical fields, e.g. for hip or knee replacements. Implants made of titanium are highly biocompatible.

The implants are fixed directly in the jaw bone. This procedure provides excellent wearing comfort. Due to the implant's small size, often only a minor surgical procedure under local anesthesia is necessary. The tooth restoration is later attached to the implant via a screw-fixed abutment.

Dental implants can restore individual teeth or support partial or full dentures.

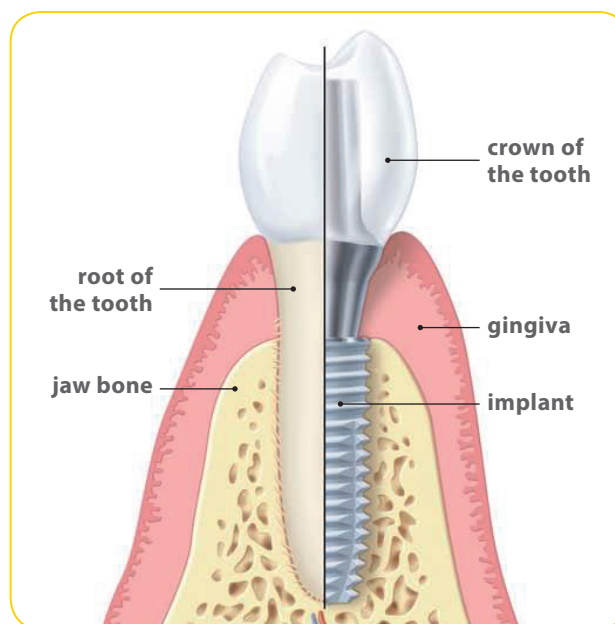

Aiming to replicate the natural make up of a tooth

An implant helps to obtain an even distribution of occlusal forces on the jaw bone. The jaw bone is stimulated by a dental implant similarly as it is stimulated by a natural tooth. This can help to avoid bone atrophy and thus, a further loss of teeth.

The healthy neighboring teeth are not compromised by this treatment. There is no need to prepare them by grinding as it would be necessary e.g. to fix a bridge on them.

Patients will keep their natural and aesthetic appearance. The dental restoration will hardly be noticeable.

Keep showing your bright smile!

Just as the rest of your teeth, dental implants require good care

Tooth brushing techniques may slightly vary for different types of dental restorations. Please ask your dentist or implantologist which brushing technique is the appropriate one for your oral situation.

In addition, we recommend to arrange regular follow-up appointments with your dentist or implantologist so that you can enjoy your new teeth for a long time.

With the IMPLA implant system, you benefit from more than 50 years of experience.

Certified safety and controlled quality „made in Germany“ are our standard.
